Professional Summary

Backend-focused Full Stack Engineer with 3 years of experience building **scalable web applications** using **TypeScript**, **Node.js**, **Next.js**, and **React**. Skilled in **AWS Lambda**, **CloudFront**, **PostgreSQL**, **MongoDB**, and **real-time data processing** for high-traffic systems. Experienced in **CI/CD pipelines**, **modular microservices**, and **end-to-end feature ownership** in startup environments.

Experience

Software Engineer

Blinker Technology

Hong kong (Remote)

June 2024 – Present

- Owned end-to-end development of **key features** in a **production KaiOS application**.
- Developed **microservice-oriented backend systems** using **Node.js**, **AWS Lambda**, ensuring modularity, scalability, and maintainability.
- Implemented **real-time data workflows** and optimized system performance under high traffic.
- Managed **multi-environment AWS infrastructure** (Dev/Staging/Prod) with **CI/CD pipelines** and monitoring.

Full-Stack Developer

Devneural Solutions

Delhi, India (Remote)

Apr 2024 - May 2024

- Owned end-to-end development of a **Next.js + Supabase application** with secure **REST APIs** and modular backend architecture.
- Designed **PostgreSQL schemas**, **SQL functions**, and **triggers** to encapsulate business logic and ensure data integrity.
- Implemented **authentication**, **authorization**, and **third-party API integrations**.
- Built **automated cron workflows** to streamline backend processes and improve operational efficiency.

Freelance / Contract Work

Self employed

Remote

Oct 2023 - Mar 2024

- Developed and maintained **Shopify applications** with backend integration and REST APIs.
- Implemented **web analytics tracking** to improve user insights and system performance.

Front-end Engineer

Arterns Technologies

Dehradun, India (Remote)

June 2023 - Sep 2023

- Developed scalable **React + TypeScript interfaces** with modular component architecture, integrating with backend APIs.
- Optimized performance** using code-splitting, lazy loading, and efficient state management.
- Collaborated cross-functionally to deliver **responsive, accessible UI systems** aligned with backend services.

Projects

Personal Portfolio — 🌐 ⚙️ 🔗

- React** and **TypeScript** site served from **S3** through **CloudFront**, with Route 53 and ACM for DNS and TLS.
- Every AWS resource defined in **Terraform**, from the CDN and certificate down to the IAM roles.
- GitHub Actions** deploys via an **OIDC** role scoped to one repo and branch, so no AWS keys are stored.

Notification Fan Out Engine — 🌐 ⚙️ 🔗

- Self-hosted notification engine on **AWS**, with every queue, function, table and IAM role in **Terraform**.
- A **NestJS** API fans validated requests onto three **priority SQS queues**, each with its own dead-letter queue.
- Lambda** workers deliver to webhooks under a per-queue **concurrency cap**, with DynamoDB-backed idempotency.

Skills And Technologies

Languages: TypeScript, JavaScript (ES6+)

Frontend: React, Next.js, Redux, Tailwind CSS

Backend: Node.js, Express.js, NestJS, REST APIs, JWT Authentication, Microservices, Real-Time Data

Databases & Cloud: PostgreSQL, MongoDB, AWS (Lambda, CloudFront, S3, API Gateway, ECS), CI/CD, Multi-Env Deployments

Aryan Thakur - Startup-oriented engineer with a strong sense of ownership and focus on performance and visibility.
